Spacebook Controllers

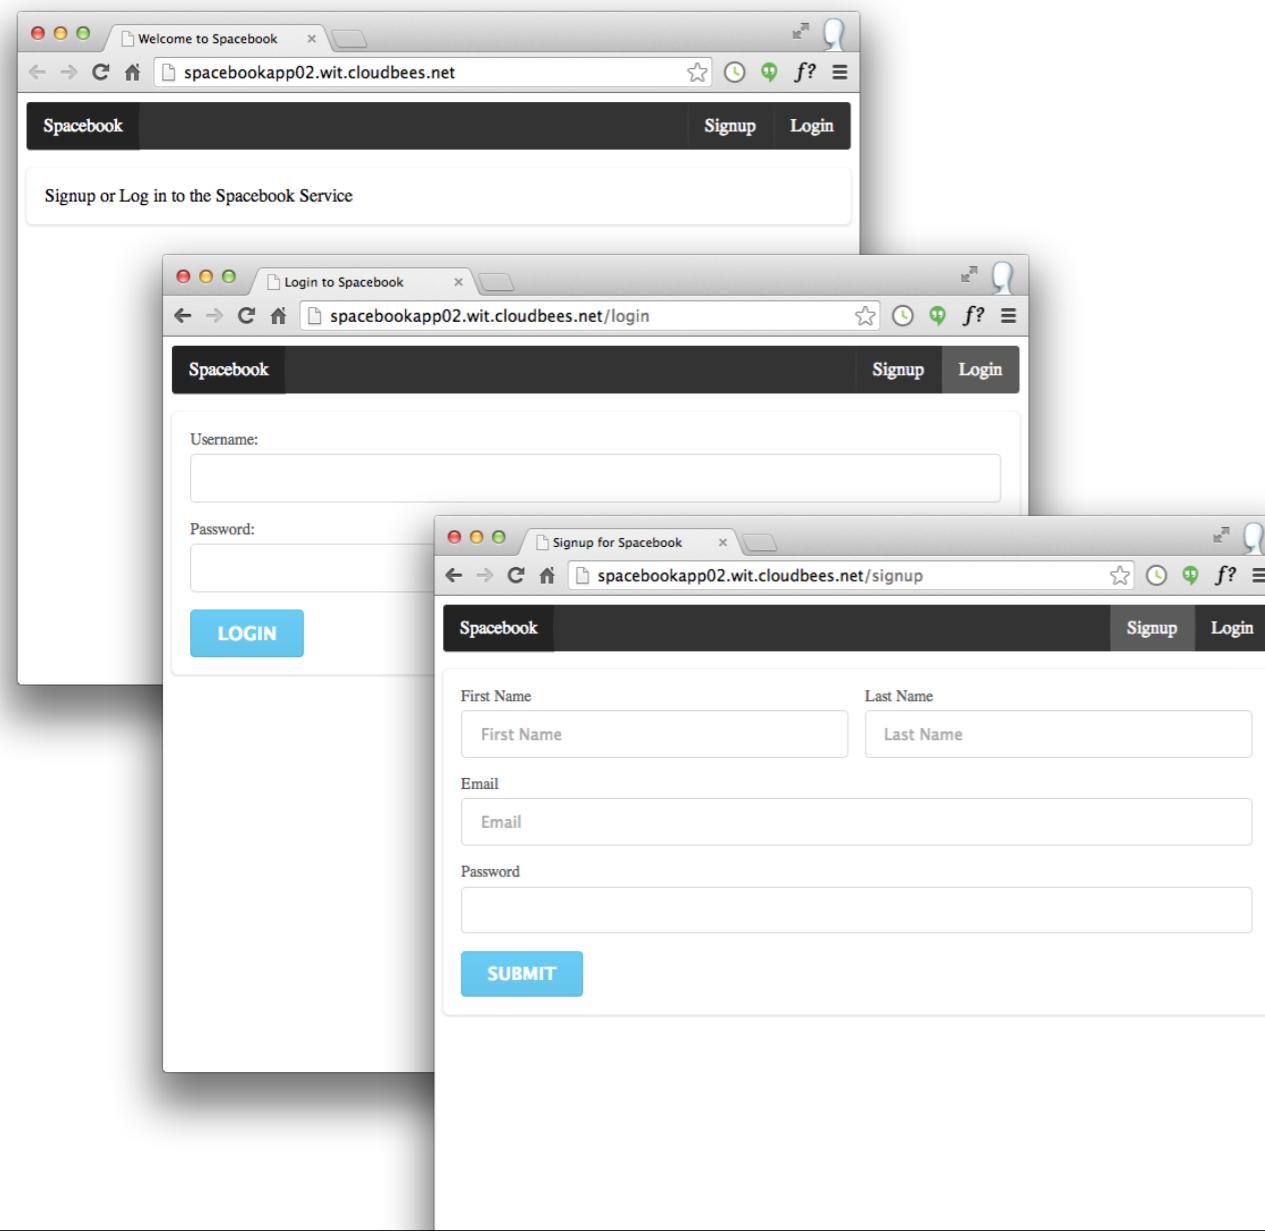

Controllers

- Controllers accept all HTTP ‘requests’
- Requests are initiated by user:
 - placing url in browser address bar
 - clicking on a link
 - submitting a form
- Requests result in methods in controllers being called
- These methods are called “Actions”

Accounts

```
# Landing page  
GET /          Accounts.index  
  
# Accounts  
GET /signup    Accounts.signup  
GET /login     Accounts.login  
GET /logout    Accounts.logout
```

```
public class Accounts extends Controller  
{  
    public static void signup()  
    {  
        render();  
    }  
  
    public static void login()  
    {  
        render();  
    }  
  
    public static void logout()  
    {  
        session.clear();  
        index();  
    }  
  
    public static void index()  
    {  
        render();  
    }  
    //...  
}
```

Accounts

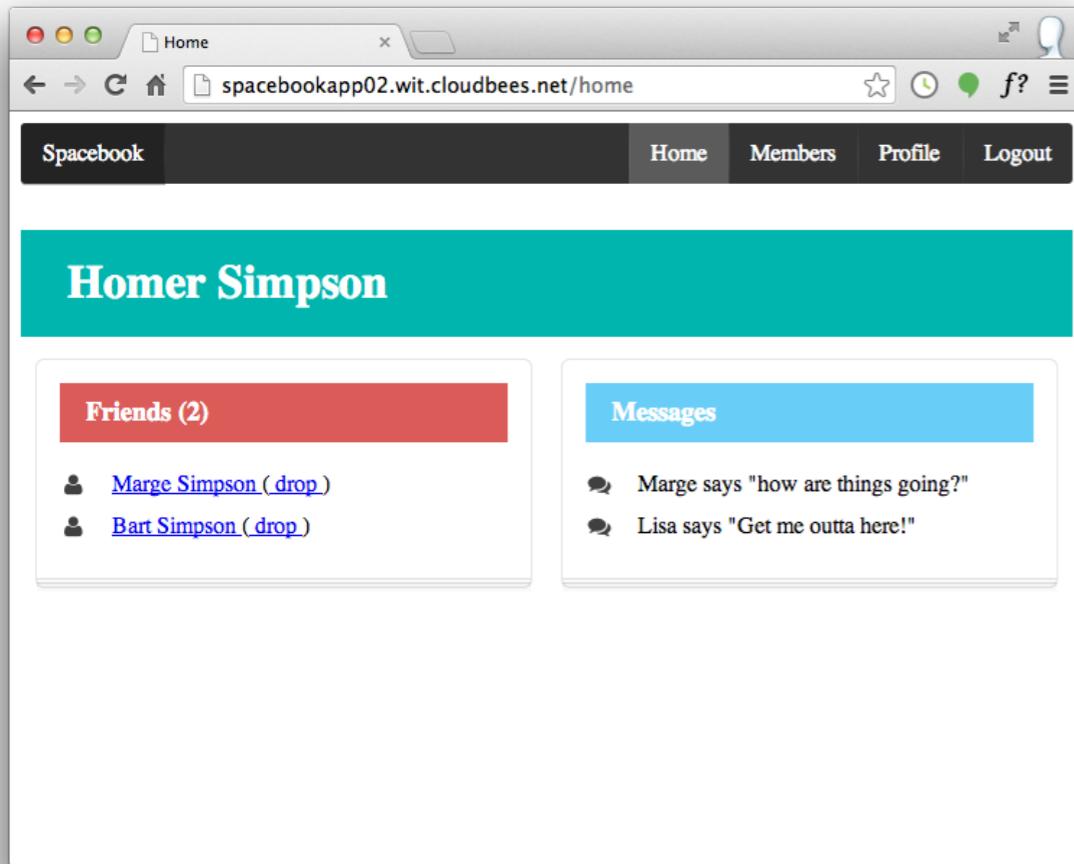

# Accounts		
POST /authenticate		Accounts.authenticate
POST /register		Accounts.register

```
public static void register(String firstName, String lastName, int age,
                           String nationality, String email, String password, String password2)
{
    Logger.info(firstName + " " + lastName + " " + email + " " + password);
    User user = new User(firstName, lastName, email, password, age, nationality);
    user.save();
    index();
}

public static void authenticate(String email, String password)
{
    Logger.info("Attempting to authenticate with " + email + ":" + password);

    User user = User.findByEmail(email);
    if (user != null) && (user.checkPassword(password) == true))
    {
        Logger.info("Authentication successful");
        session.put("logged_in_userid", user.id);
        Home.index();
    }
    else
    {
        Logger.info("Authentication failed");
        login();
    }
}
```

Home

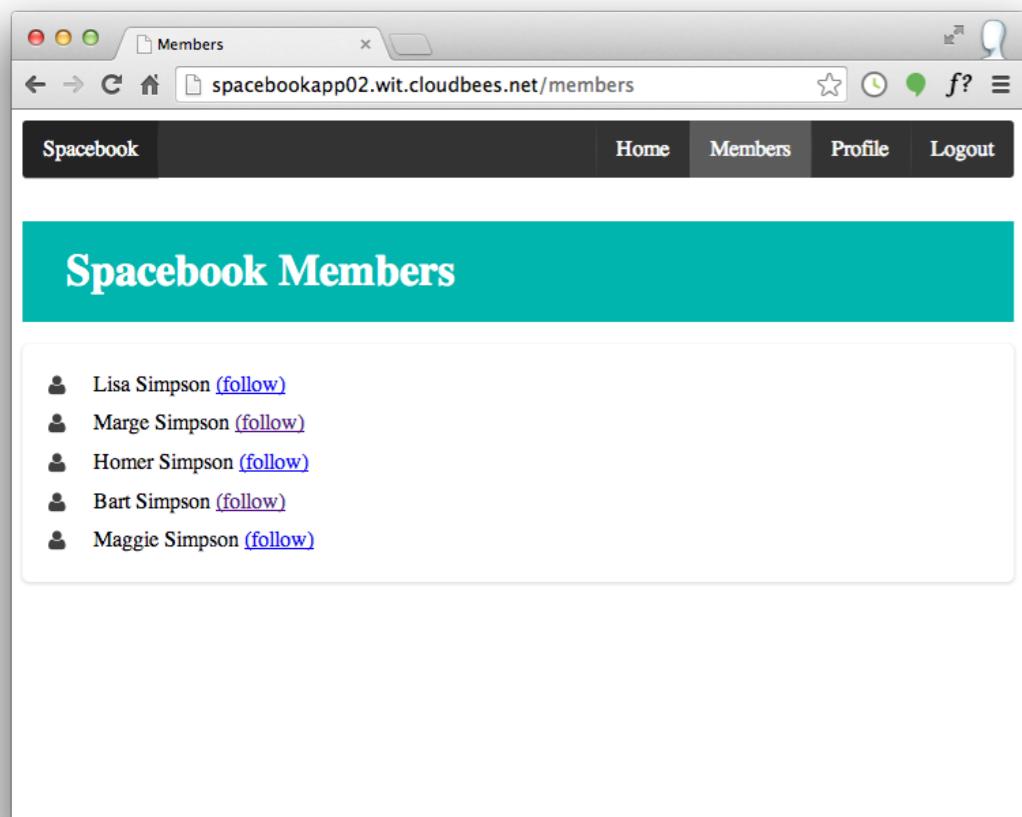

```
# Home page  
GET      /home  
GET      /home/drop/{id}
```

[Home.index](#)
[Home.drop](#)

```
public class Home extends Controller  
{  
    public static void index()  
    {  
        User user = Accounts.getLoggedInUser();  
        render(user);  
    }  
  
    public static void drop(Long id)  
    {  
        User user      = Accounts.getLoggedInUser();  
        User friend = User.findById(id);  
        user.unfriend(friend);  
        Logger.info("Dropping " + friend.email);  
        index();  
    }  
}
```

Members

```
# Members page
GET      /members
GET      /members/follow/{id}
```

[Members.index](#)
[Members.follow](#)

```
public class Members extends Controller
{
    public static void index()
    {
        User user = Accounts.getLoggedInUser();
        List<User> users = User.findAll();
        render(users);
    }

    public static void follow(Long id)
    {
        User user = Accounts.getLoggedInUser();
        User friend = User.findById(id);
        user.befriend(friend);
        Home.index();
    }
}
```

Profile

#

Profile page

GET	/profile	Profile.index
POST	/profile/changestatus	Profile.changeStatus
POST	/profile/uploadpicture/{id}	Profile.uploadPicture
GET	/profile/getpicture/{id}	Profile.getPicture

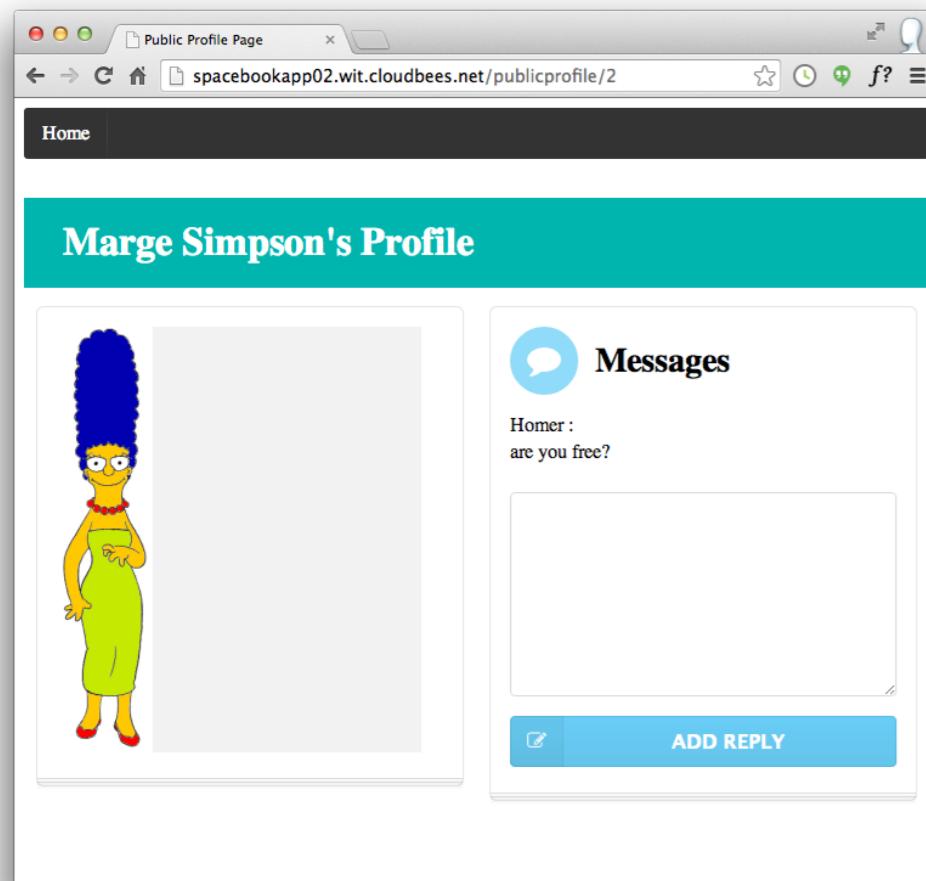

```
public class Profile extends Controller
{
    public static void index()
    {
        User user = Accounts.getLoggedInUser();
        render(user);
    }

    public static void changeStatus(String statusText)
    {
        User user = Accounts.getLoggedInUser();
        user.statusText = statusText;
        user.save();
        Logger.info("Status changed to " + statusText);
        index();
    }

    public static void getPicture(Long id)
    {
        User user = User.findById(id);
        Blob picture = user.profilePicture;
        if (picture.exists())
        {
            response.setContentTypeIfNotSet(picture.type());
            renderBinary(picture.get());
        }
    }

    public static void uploadPicture(Long id, Blob picture)
    {
        User user = User.findById(id);
        user.profilePicture = picture;
        user.save();
        Logger.info("saving picture");
        index();
    }
}
```

PublicProfile

```
# Public Profiles
GET   /publicprofile/{id}          PublicProfile.visit
POST  /publicprofile/sendmessage/{id}  PublicProfile.sendMessage

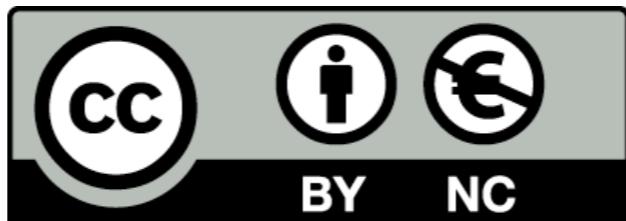

public class PublicProfile extends Controller
{
    public static void visit(Long id)
    {
        User currentUser = Accounts.getLoggedInUser();

        User user = User.findById(id);
        Logger.info("Just visiting the page for " + user.firstName + ' '
                    + user.lastName);
        render(user);
    }

    public static void sendMessage(Long id, String messageText)
    {
        User fromUser = Accounts.getLoggedInUser();
        User toUser = User.findById(id);

        Logger.info("Message from user " +
                    fromUser.firstName + ' ' + fromUser.lastName + " to " +
                    toUser.firstName + ' ' + toUser.lastName + ": " +
                    messageText);

        fromUser.sendMessage(toUser, messageText);
        visit(id);
    }
}
```
