Spacebook Skeleton

Web Development

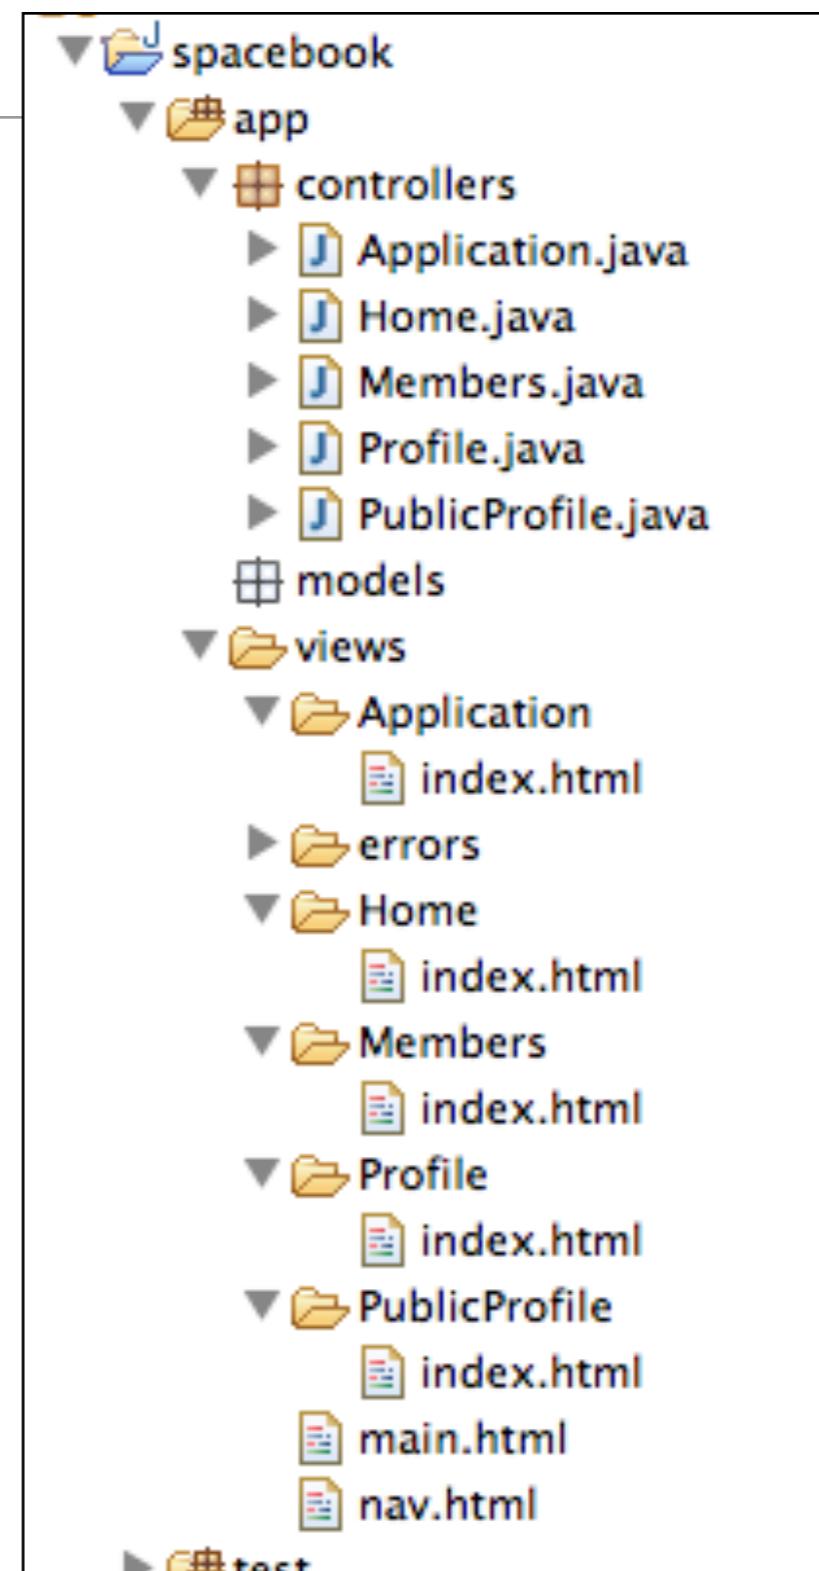

‘Mock-Up’ spacebook-bootstrap project

- spacebook-semantic is a version of the spacebook site built using Semantic UI libraries
- Incorporates multicolumn layout
- Navigation bar
- Simple lists
- images

spacebook Play project

- A Dynamic Web Application Project

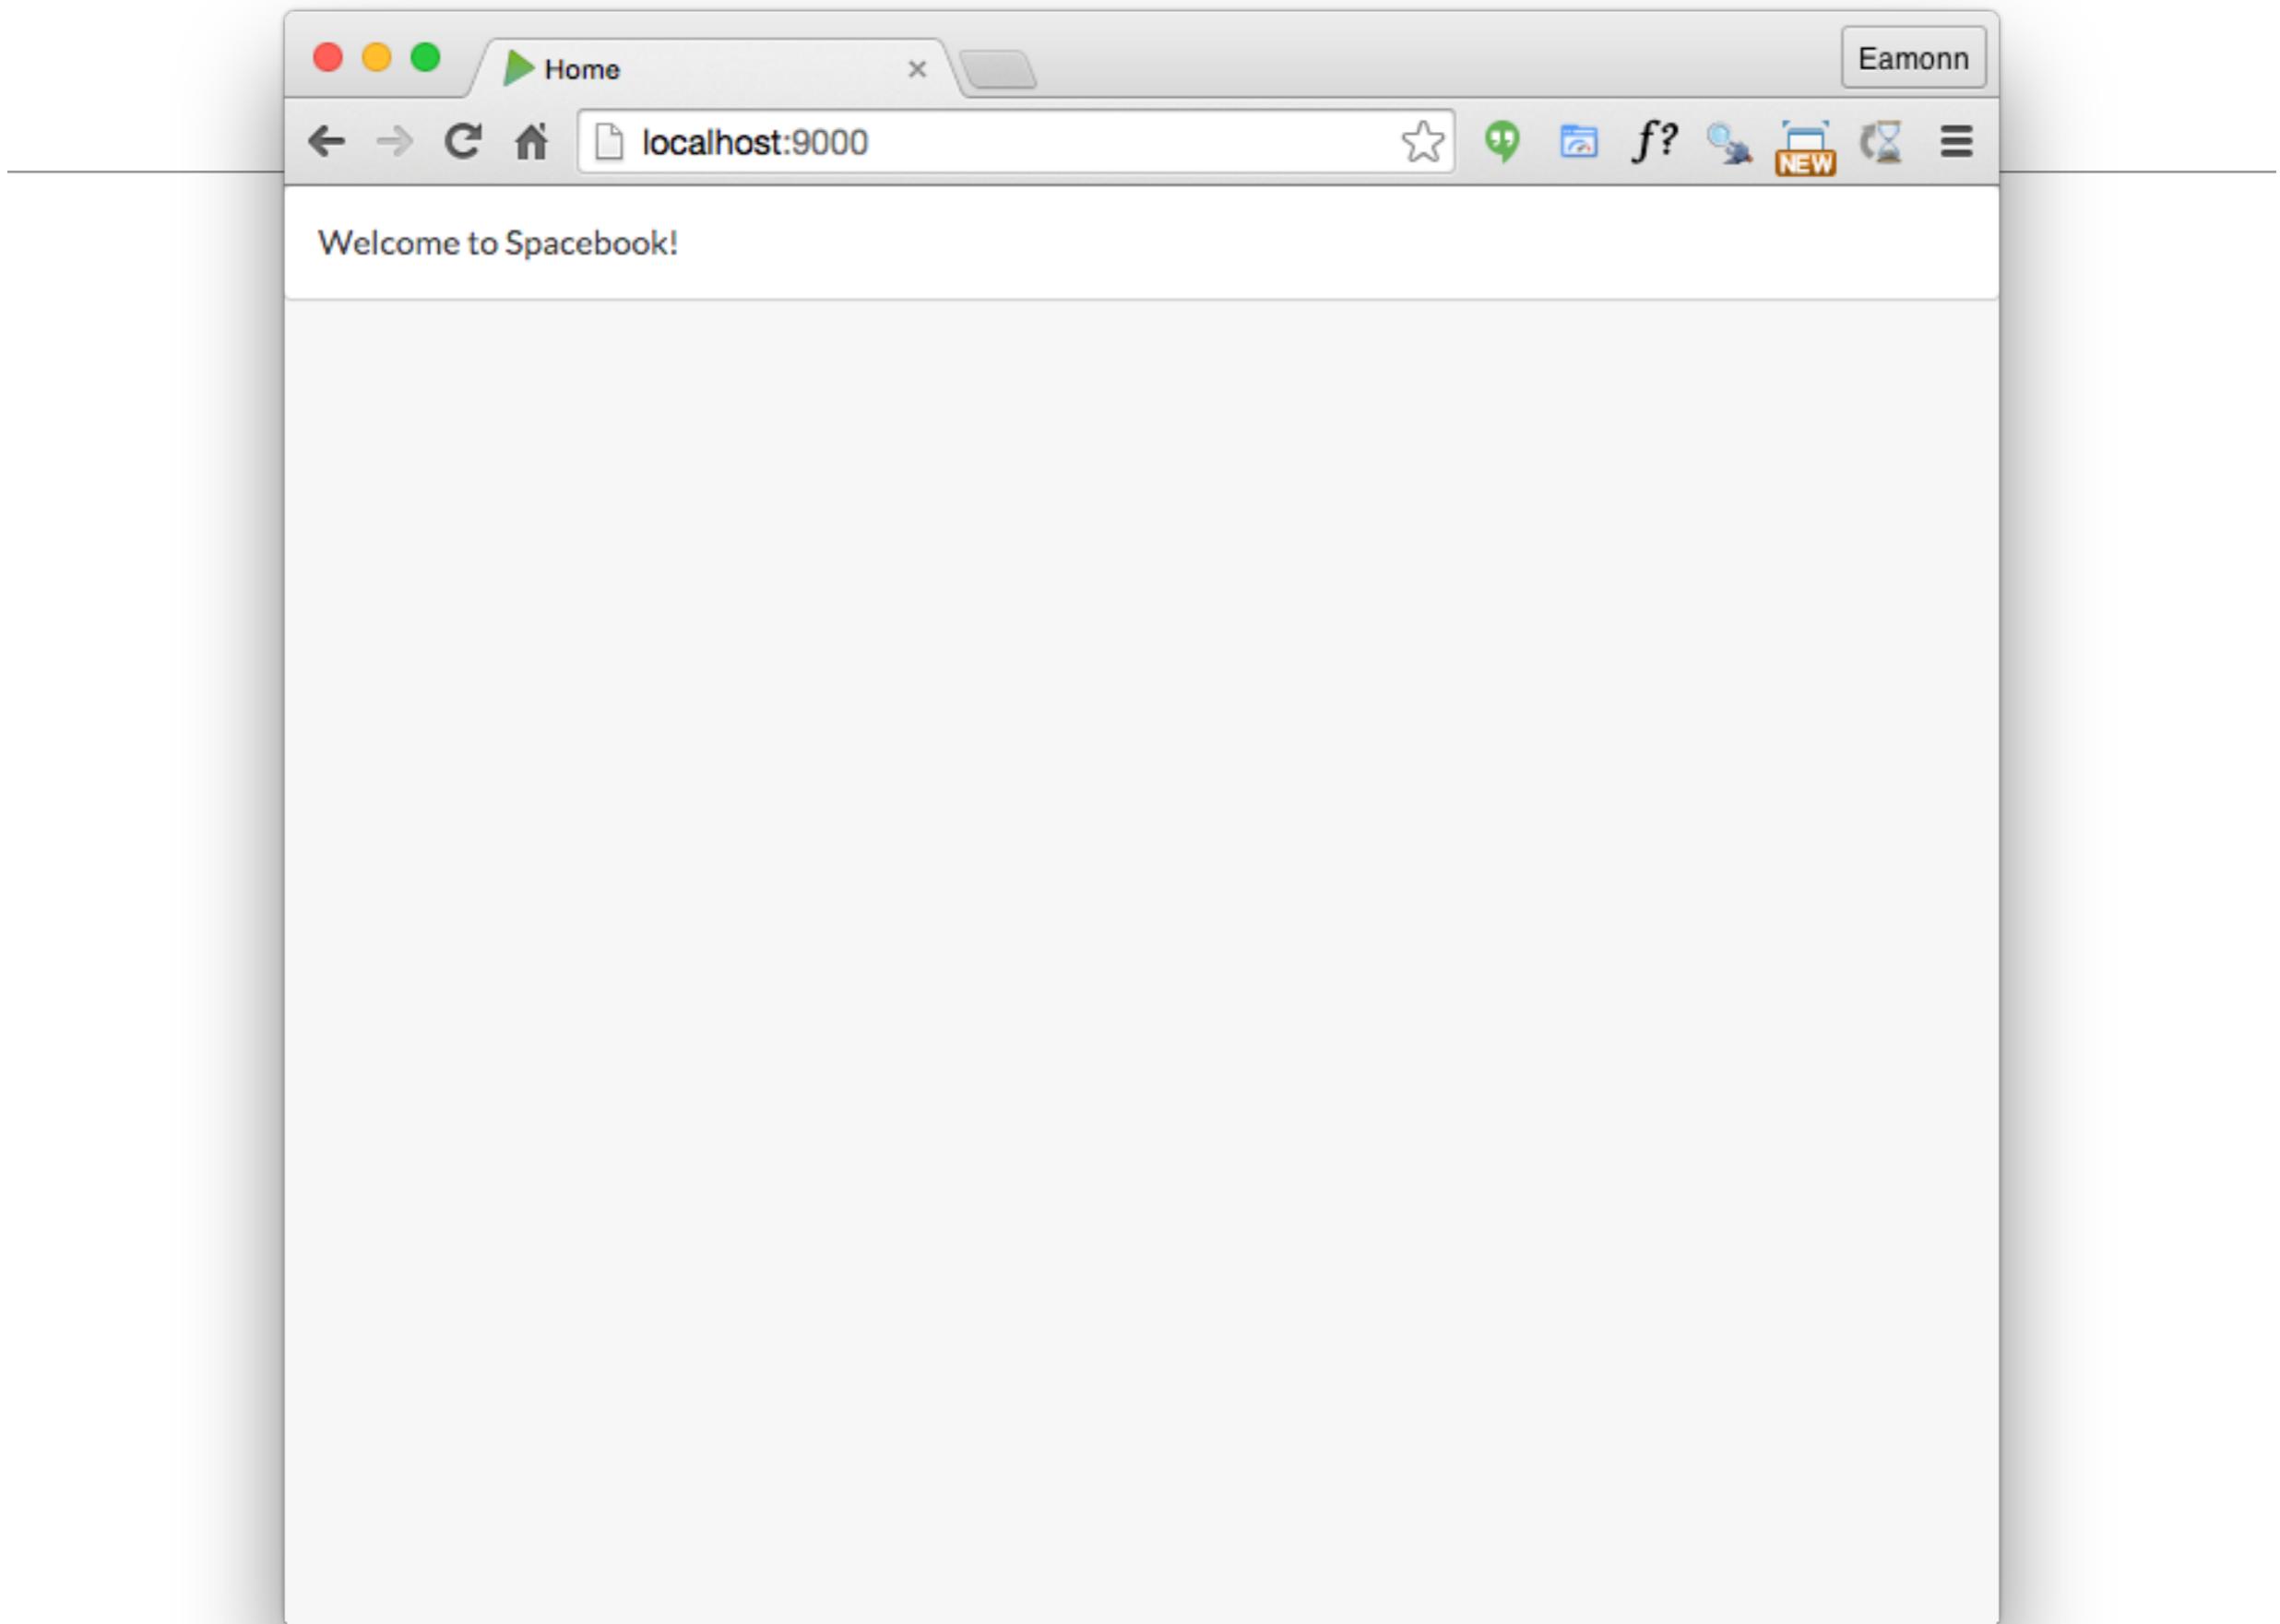

main.html

```
<!DOCTYPE html>
<html>
  <head>
    <title>#{get 'title' /}</title>
    <meta charset="${_response_encoding}">
    <link rel="stylesheet" type="text/css" href="http://cdnjs.cloudflare.com/ajax/libs/semantic-u
    <script src="http://code.jquery.com/jquery-2.1.1.min.js"></script>
    <script src="http://cdnjs.cloudflare.com/ajax/libs/semantic-ui/2.1.8/semantic.min.js"></scrip
    <link rel="stylesheet" media="screen" href="@{'/public/stylesheets/main.css'}">
    <link rel="shortcut icon" type="image/png" href="@{'/public/images/favicon.png'}">
  </head>
  <body>
    <section class="ui segment">
      #{doLayout /}
    </section>
  </body>
</html>
```

- Link to semantic ui files
- Standard html - except!
 - '#' symbol is not html - what does it mean?
 - '@' symbol also not teml

Styled with Semantic default theme

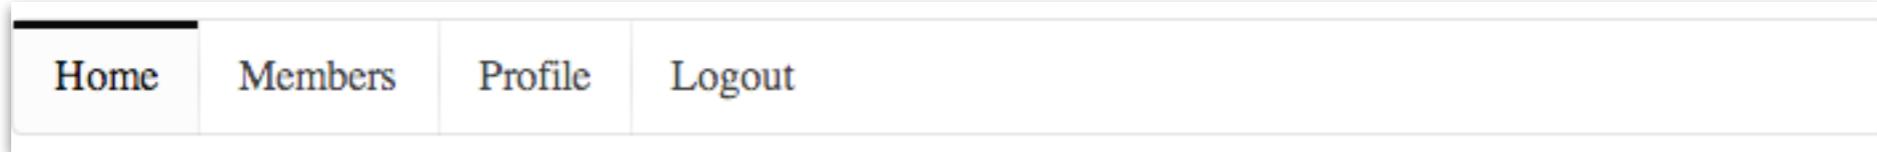

View/source

The screenshot shows a web browser window with the title bar "view-source:localhost:9000". The address bar also displays "view-source:localhost:9000". The browser interface includes standard buttons for back, forward, search, and refresh, along with a user profile "Eamonn" and a "NEW" tab indicator.

```
1 <!DOCTYPE html>
2
3 <html>
4   <head>
5     <title>Home</title>
6     <meta charset="utf-8">
7     <link rel="stylesheet" media="screen" href="/public/stylesheets/main.css">
8       <link rel="shortcut icon" type="image/png"
9         href="/public/images/favicon.png">
10        <link rel="stylesheet" media="screen"
11          href="/public/semantic/semantic.min.css">
12
13   </head>
14   <body>
15     <div class="ui segment">
16
17       <p>
18         Welcome to Spacebook!
19       </p>
20
21     <script src="/public/javascripts/jquery-1.6.4.min.js" type="text/javascript"
22       charset="utf-8"></script>
23       <script src="/public/semantic/semantic.js" type="text/javascript"
24       charset="utf-8"></script>
25     </body>
26
27 </html>
```

menu bar

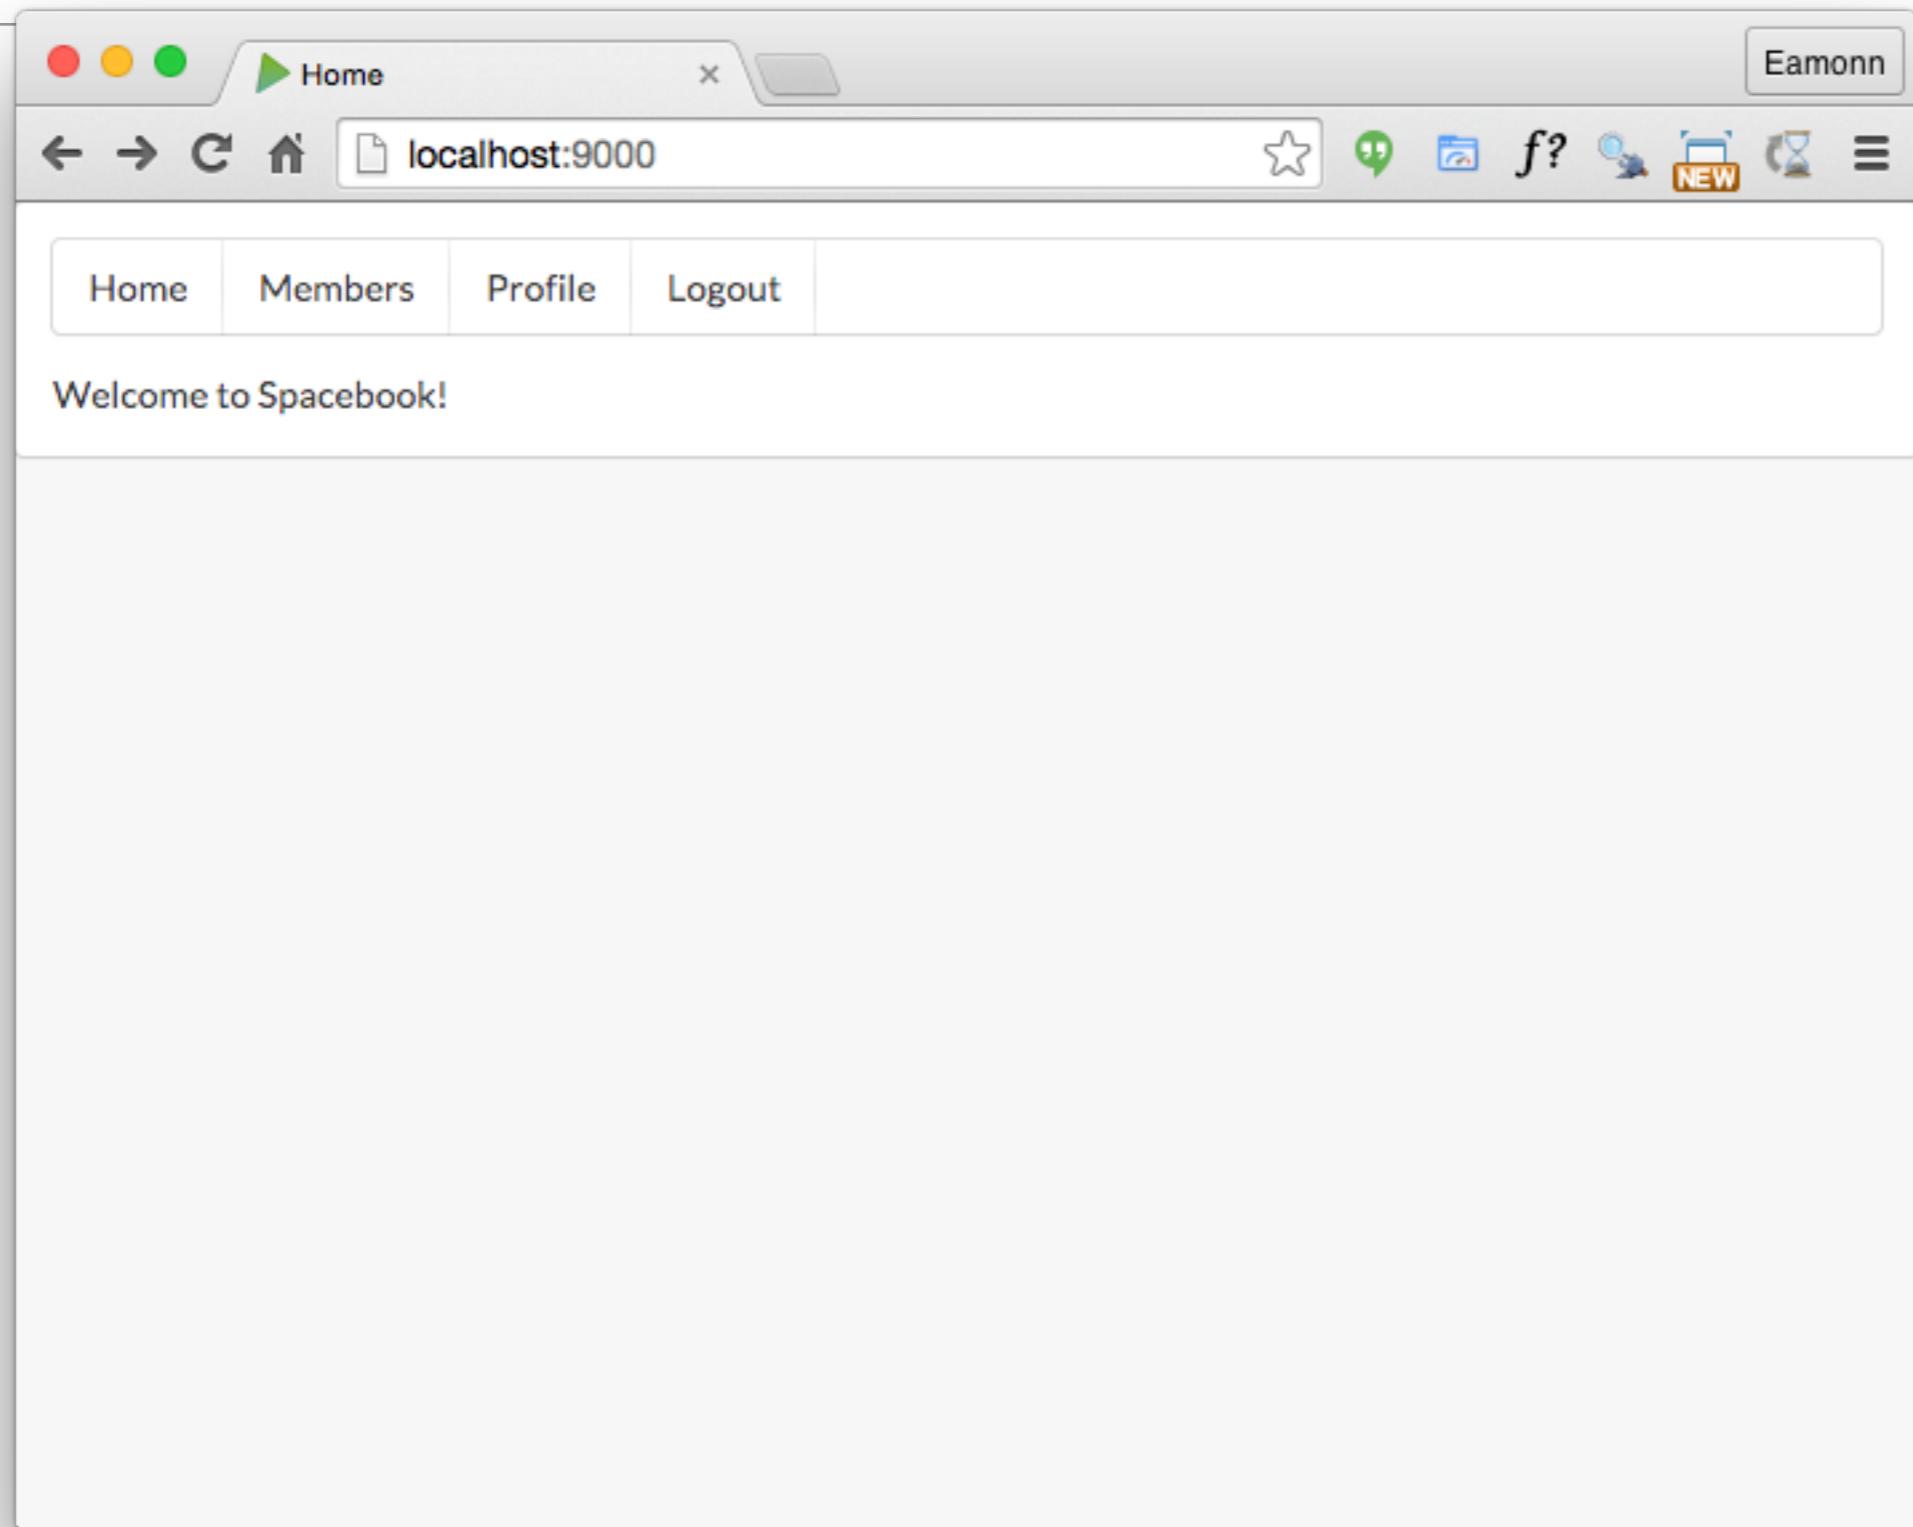

```
<nav class="ui menu">
  <a class="ui item" href="home.html">Home</a>
  <a class="ui item" href="members.html">Members</a>
  <a class="ui item" href="homeprofile.html">Profile</a>
  <a class="ui item" href="login.html">Logout</a>
</nav>
```

Menu in a view

```
#extends 'main.html' /  
#{set title:'Home' /}  
  
<nav class="ui menu">  
  <a class="ui item" href="home.html">Home</a>  
  <a class="ui item" href="members.html">Members</a>  
  <a class="ui item" href="homeprofile.html">Profile</a>  
  <a class="ui item" href="login.html">Logout</a>  
</nav>  
  
<p>  
  Welcome to Spacebook!  
</p>
```

Menu now part of the rendered page

view->source

The screenshot shows a web browser window with the title bar "view-source:localhost:9000". The address bar also displays "view-source:localhost:9000". The browser interface includes standard buttons for back, forward, and search, along with a "NEW" button. The main content area is a code editor showing the HTML source code of a page titled "Home". The code includes links to CSS files like "main.css" and "semantic.min.css", and JavaScript files like "jquery-1.6.4.min.js" and "semantic.js". The browser status bar at the bottom shows the URL "localhost:9000/homeprofile.html".

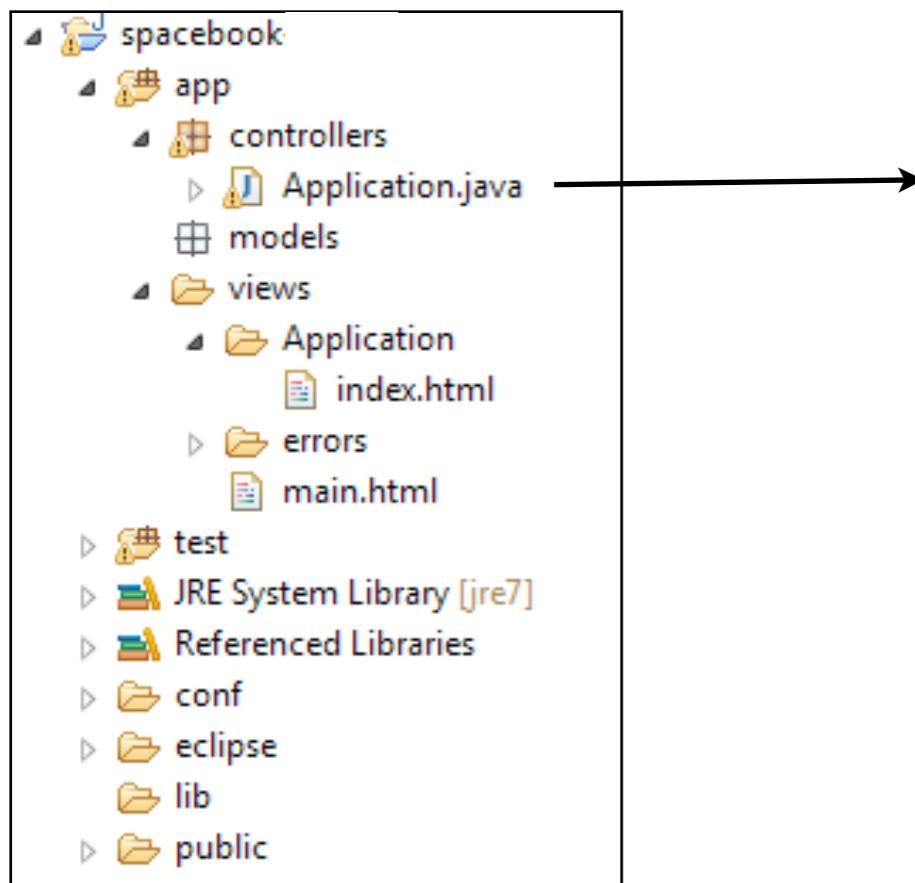

```
1 <!DOCTYPE html>
2
3 <html>
4   <head>
5     <title>Home</title>
6     <meta charset="utf-8">
7     <link rel="stylesheet" media="screen" href="/public/stylesheets/main.css">
8       <link rel="shortcut icon" type="image/png"
9         href="/public/images/favicon.png">
10        <link rel="stylesheet" media="screen"
11          href="/public/semantic/semantic.min.css">
12
13   </head>
14   <body>
15     <div class="ui segment">
16
17       <nav class="ui menu">
18         <a class="ui item" href="home.html">Home</a>
19         <a class="ui item" href="members.html">Members</a>
20         <a class="ui item" href="homeprofile.html">Profile</a>
21         <a class="ui item" href="login.html">Logout</a>
22       </nav>
23
24       <p>
25         Welcome to Spacebook!
26       </p>
27
28       <script src="/public/javascripts/jquery-1.6.4.min.js" type="text/javascript"
29         charset="utf-8"></script>
30         <script src="/public/semantic/semantic.js" type="text/javascript"
31         charset="utf-8"></script>
32       </body>
33
34 </html>
```

Clicking the menu links...

The screenshot shows a web browser window with the title bar "Not found". The address bar displays "localhost:9000/members". The main content area is yellow and contains the text "Not found" and "GET /members". Below this, it says "These routes have been tried, in this order :". A numbered list of routes is shown, each with its method, pattern, and corresponding controller or status.

Order	Method	Pattern	Controller/Status
1.	GET	/@documentation/cheatsheet/{category}	PlayDocumentation.cheatSheet
2.	GET	/@documentation/modules/{module}/files/{name}	PlayDocumentation.file
3.	GET	/@documentation/modules/{module}/images/{name}	PlayDocumentation.image
4.	GET	/@documentation/modules/{module}/{id}	PlayDocumentation.page
5.	GET	/@documentation/files/{name}	PlayDocumentation.file
6.	GET	/@documentation/images/{name}	PlayDocumentation.image
7.	GET	/@documentation/{id}	PlayDocumentation.page
8.	GET	/@documentation/?	PlayDocumentation.index
9.	GET	/	Application.index
10.	GET	/favicon.ico	404
11.	GET	/public/	staticDir:public
12.	*	/{controller}/{action}	{controller}.{action}

Controllers

```
package controllers;

import play.*;
import play.mvc.*;

import java.util.*;

import models.*;

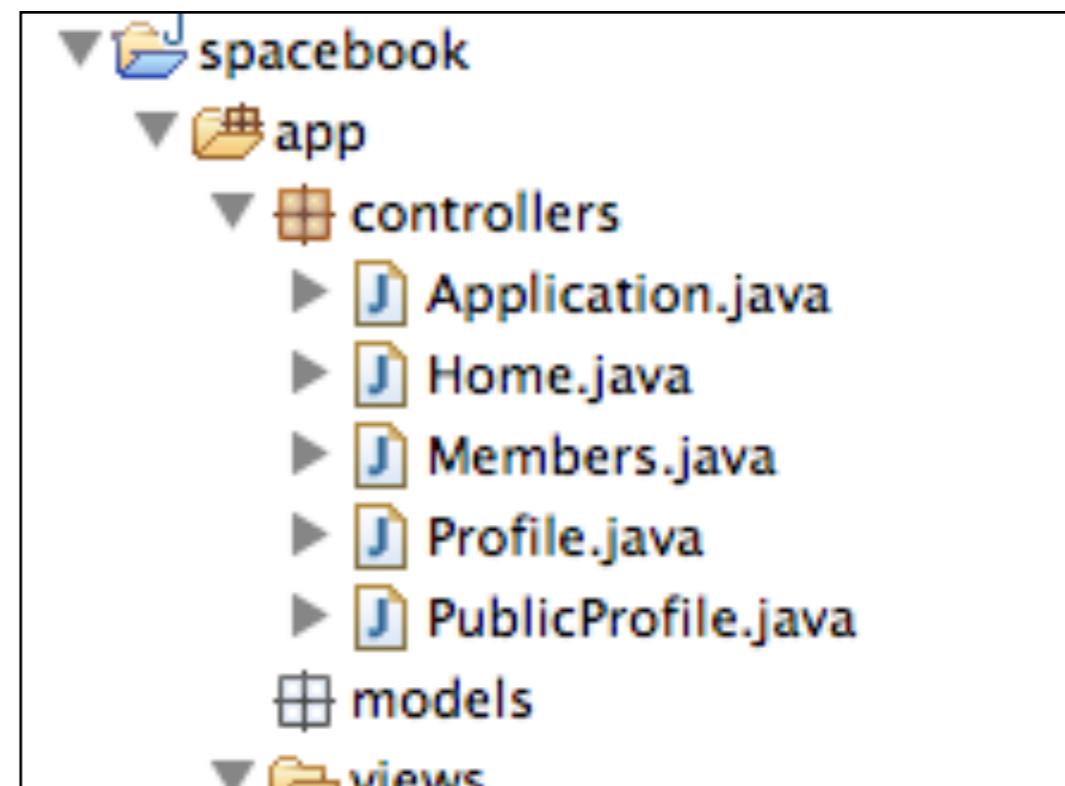

public class Application extends Controller
{
    public static void index()
    {
        render();
    }
}
```

- Controller is a Java class containing:
 - public ‘static’ methods
 - Static -> do not require ‘objects’, can be invoked independently.

Revised Project

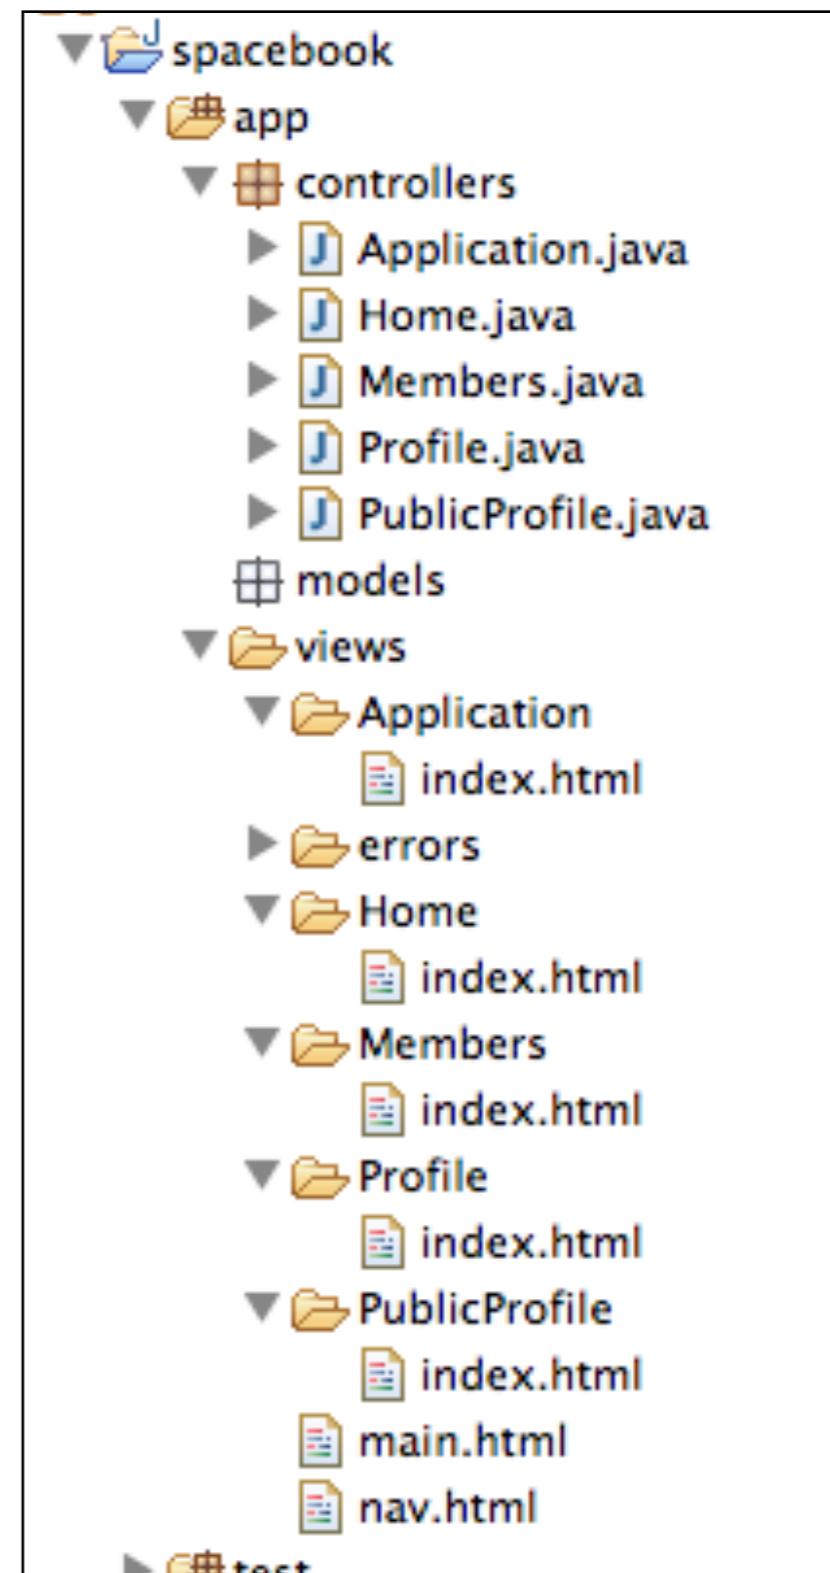

Controllers - One per ‘View’

- One way of thinking about controllers is that a separate controller is required to ‘supervise’ one view.
- Create 4 controllers, one for each of our nav bar items (almost):
 - Home
 - Members
 - Profile
 - PublicProfile
- Each controller can be the same (except for its name)

Controller/View Correspondence

- Each controller must have a corresponding ‘view’
- This will be called ‘index.html’ by default, and be located in a folder - named identically to the controller - in the views folder

Controller ‘Wiring’ - the routes file

- This file contains a mapping:
 - incoming request -> Java Controller

```
# Routes
# This file defines all application routes (Higher priority routes first)
# ~~~~

# Home page
GET      /                               Application.index

# Ignore favicon requests
GET      /favicon.ico                   404

# Map static resources from the /app/public folder to the /public path
GET      /public/                         staticDir:public

# Catch all
*       /{controller}/{action}           {controller}.{action}
```

Wiring up the controllers

```
# Routes
# This file defines all application routes (Higher priority routes first)
# ~~~~

# Landing page
GET   /           Home.index

# Home page
GET   /home       Home.index

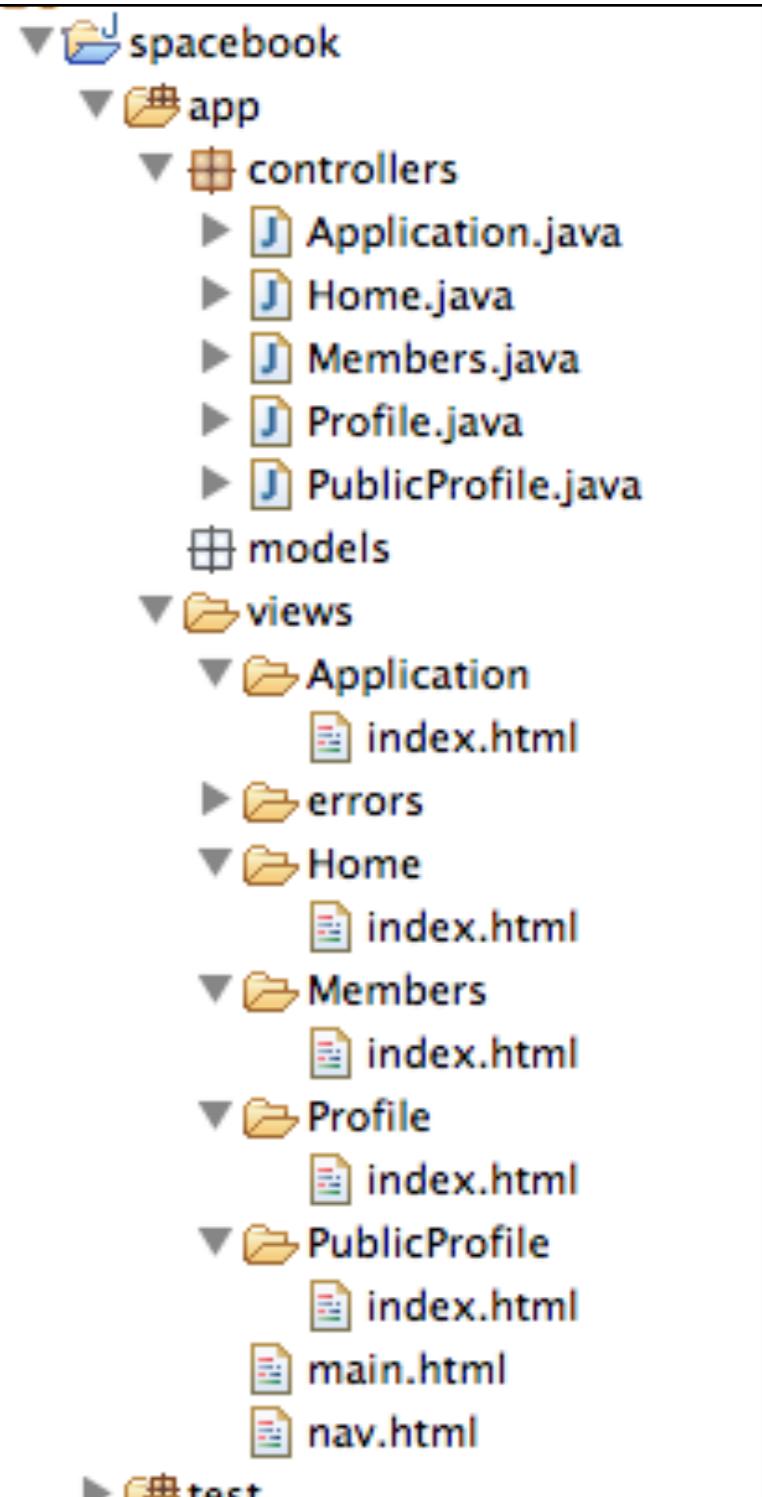

# Members page
GET   /members    Members.index

# Profile page
GET   /profile    Profile.index

# Ignore favicon requests
GET   /favicon.ico 404

# Map static resources from the /app/public folder to the /public path
GET   /public/     staticDir:public

# Catch all
*    /{controller}/{action} {controller}.{action}
```

The Controllers

- Much of the ‘Programming’ of the web application will take place in these classes

```
public class Home extends Controller
{
    public static void index()
    {
        render();
    }
}
```

```
public class Profile extends Controller
{
    public static void index()
    {
        render();
    }
}
```

```
public class Members extends Controller
{
    public static void index()
    {
        render();
    }
}
```

```
public class PublicProfile extends Controller
{
    public static void index()
    {
        render();
    }
}
```

The Views

- Each controller ‘renders’ each of these views.

```
#{extends 'main.html' /}
#{set title:'Profile' /}
<nav class="ui menu">
  <a class="ui active item" href="/home">Home</a>
  <a class="ui item" href="/members">Members</a>
  <a class="ui item" href="/profile">Profile</a>
  <a class="ui item" href="/login">Logout</a>
</nav>

<p>
  Welcome to the Spacebook Profile Page
</p>
```

```
#{extends 'main.html' /}
#{set title:'Home' /}
<nav class="ui menu">
  <a class="ui active item" href="/home">Home</a>
  <a class="ui item" href="/members">Members</a>
  <a class="ui item" href="/profile">Profile</a>
  <a class="ui item" href="/login">Logout</a>
</nav>

<p>
  Welcome to the Spacebook Home Page
</p>
```

```
#{extends 'main.html' /}
#{set title:'Members' /}
<nav class="ui menu">
  <a class="ui active item" href="/home">Home</a>
  <a class="ui item" href="/members">Members</a>
  <a class="ui item" href="/profile">Profile</a>
  <a class="ui item" href="/login">Logout</a>
</nav>

<p>
  Welcome to the Spacebook Members Page
</p>
```

```

# Routes
# This file defines all application routes (Higher priority route at top)
# ~~~~

# Landing page
GET    /           Home.index

# Home page
GET    /home      Home.index

# Members page
GET    /members   Members.index

# Profile page
GET    /profile   Profile.index

# Ignore favicon requests
GET    /favicon.ico        404

# Map static resources from the /app/public folder to the /public URL
GET    /public/    staticDir:public

# Catch all
*    /{controller}/{action}

```

```

public class Home extends Controller
{
    public static void index()
    {
        render();
    }
}

```

```

public class Profile extends Controller
{
    public static void index()
    {
        render();
    }
}

```

```

public class Members extends Controller
{
    public static void index()
    {
        render();
    }
}

```

```

#{extends 'main.html' /}
#{set title:'Profile' /}
<nav class="ui menu">
    <a class="ui active item" href="/home">Home</a>
    <a class="ui item" href="/members">Members</a>
    <a class="ui item" href="/profile">Profile</a>
    <a class="ui item" href="/login">Logout</a>
</nav>

<p>
    Welcome to the Spacebook Profile Page
</p>

```

```

#{extends 'main.html' /}
#{set title:'Home' /}
<nav class="ui menu">
    <a class="ui active item" href="/home">Home</a>
    <a class="ui item" href="/members">Members</a>
    <a class="ui item" href="/profile">Profile</a>
    <a class="ui item" href="/login">Logout</a>
</nav>

<p>
    Welcome to the Spacebook Home Page
</p>

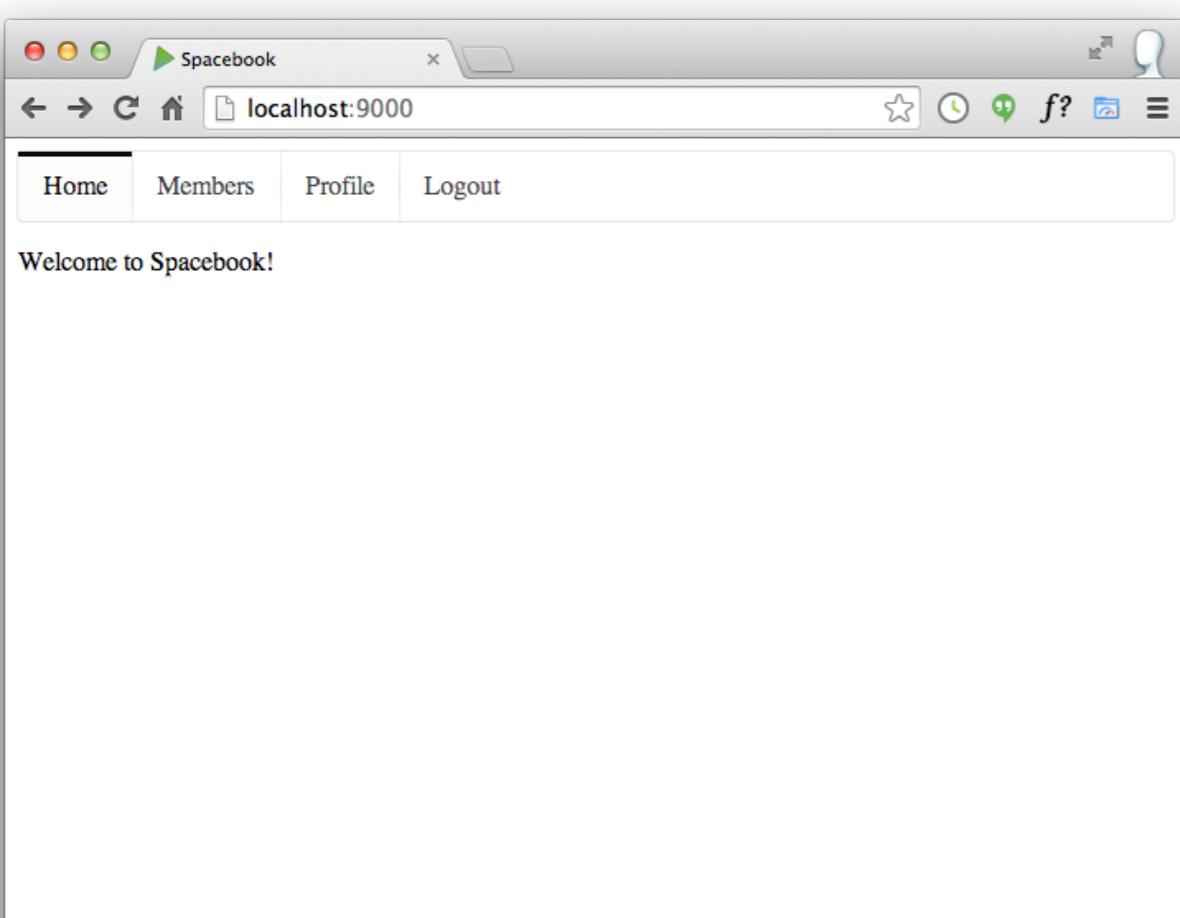

```

```

#{extends 'main.html' /}
#{set title:'Members' /}
<nav class="ui menu">
    <a class="ui active item" href="/home">Home</a>
    <a class="ui item" href="/members">Members</a>
    <a class="ui item" href="/profile">Profile</a>
    <a class="ui item" href="/login">Logout</a>
</nav>

<p>
    Welcome to the Spacebook Members Page
</p>

```

Play Request Lifecycle

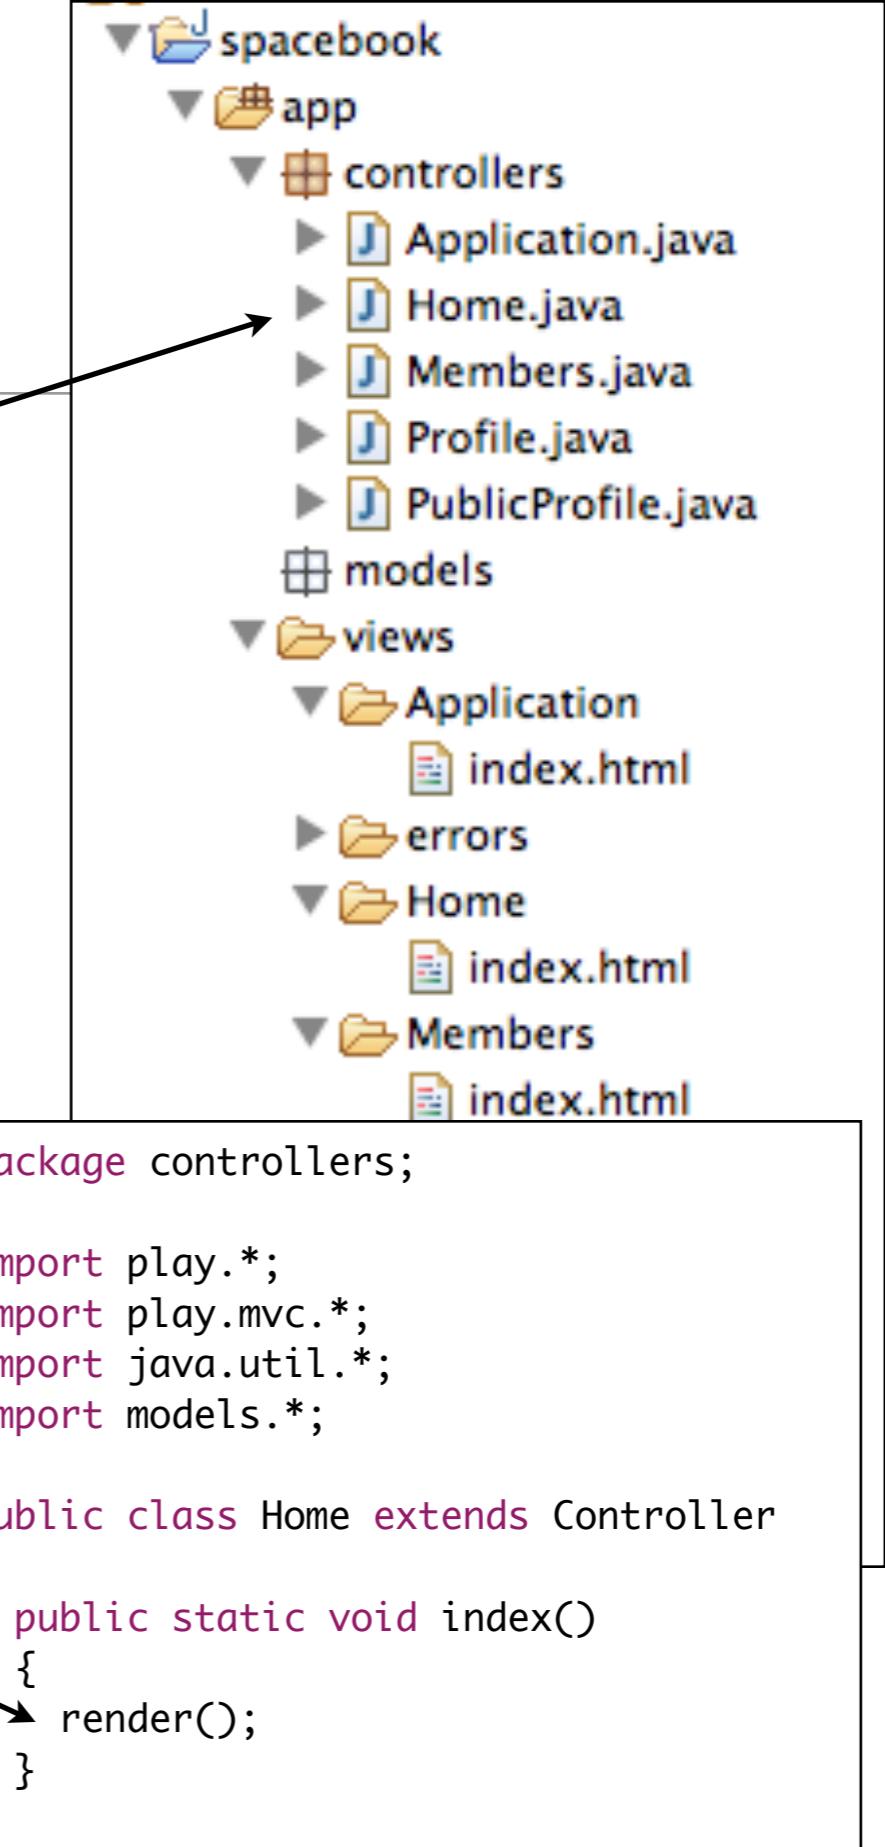

Lifecycle (1)

- Execute ‘play run’ in the spacebook folder
- Browse to `http://localhost:9000/home`
- The “home” at the end of this url is
 - passed to the ‘routes’ file
 - a match found
 - which triggers a call to the Java class method ‘Home.index()’

GET	/home	Home.index
-----	-------	------------

Lifecycle (2)

- The Home class is always in the ‘controllers’ package
- The index() method just calls “render()”

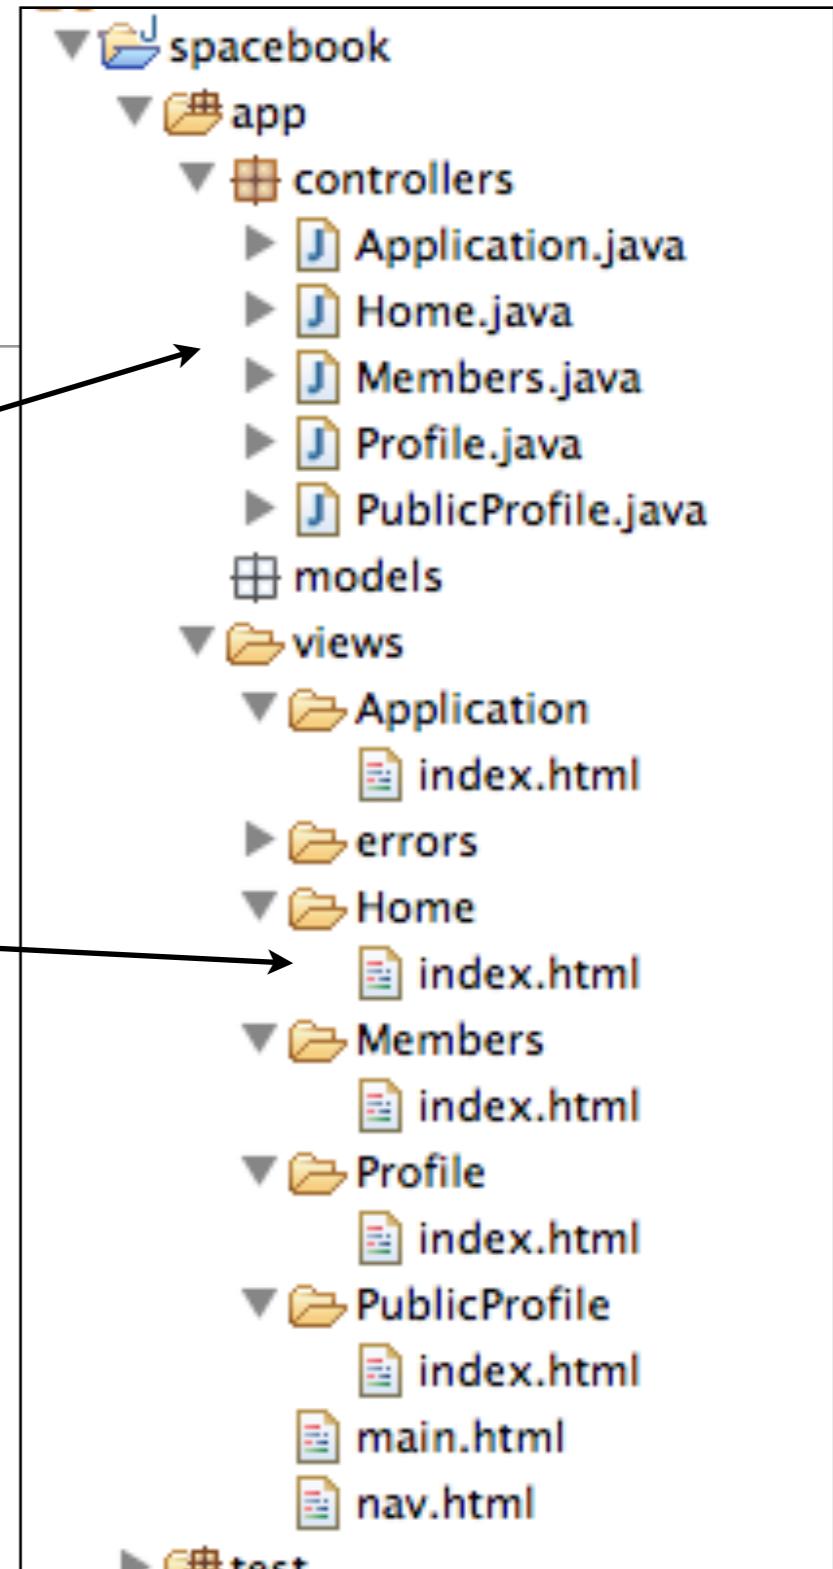

Lifecycle (3)

```
package controllers;

import play.*;
import play.mvc.*;
import java.util.*;
import models.*;

public class Home extends Controller
{
    public static void index()
    {
        render();
    }
}
```

- The Home controller is partnered with a ‘Home’ view
- render() triggers the generation of a this view
- This view will be generated from the file ‘index.html in the “Home” folder in views
- Once generated, it will be passed back to the browser in response to the original request.

Generating the ‘Home’ view - templates

main.html

```
<!DOCTYPE html>
<html>
  <head>
    <title>#{get 'title' /}</title>
    <meta charset="utf-8">
    <link rel="stylesheet" media="screen" href="@{'/public/semantic/css/semantic.min.css'}">
  </head>
  <body>
    #{doLayout /}
  </body>
</html>
```

index.html

```
#{extends 'main.html' /}
#{set title:'Home' /}

<nav class="ui menu">
  <a class="ui active item" href="/home">Home</a>
  <a class="ui item" href="/members">Members</a>
  <a class="ui item" href="/profile">Profile</a>
  <a class="ui item" href="/login">Logout</a>
</nav>

<p>
  Welcome to the Spacebook Home!
</p>
```

Lifecycle (4)

```
#extends 'main.html' /  
#set title:'Home' /  
  
<nav class="ui menu">  
  <a class="ui active item" href="/home">Home</a>  
  <a class="ui item" href="/members">Members</a>  
  <a class="ui item" href="/profile">Profile</a>  
  <a class="ui item" href="/login">Logout</a>  
</nav>  
  
<p>  
  Welcome to the Spacebook Home!  
</p>
```

```
<!DOCTYPE html>  
<html>  
  <head>  
    //...Not Shown  
  </head>  
  <body>  
    #{doLayout /}  
  </body>  
</html>
```

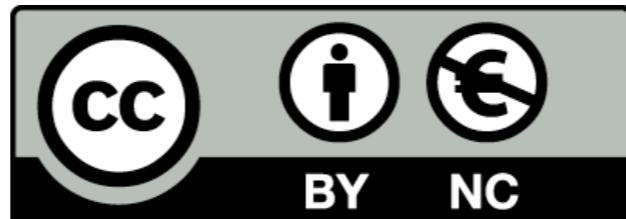

- The home page is integrated into main.html replacing #{doLayout /}
- ...the ‘title’ string is replaced with ‘Home’ during the page construction

The image shows two overlapping browser windows. The top window displays the Spacebook homepage at `localhost:9000`. The page has a header with links for Home, Members, Profile, and Logout. Below the header is a welcome message: "Welcome to Spacebook!". The bottom window shows the source code of the same page, titled "view-source:localhost:9000". The source code is as follows:

```
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <title>Spacebook</title>
5     <meta charset="utf-8">
6     <link rel="stylesheet" media="screen"
7 href="/public/semantic/css/semantic.min.css">
8   </head>
9   <body>
10
11   <nav class="ui menu">
12     <a class="ui active item" href="home.html">Home</a>
13     <a class="ui item" href="members.html">Members</a>
14     <a class="ui item" href="homeprofile.html">Profile</a>
15     <a class="ui item" href="login.html">Logout</a>
16   </nav>
17
18   <p>
19     Welcome to Spacebook!
20   </p>
21 </body>
22 </html>
```

Lifecycle (5)

- Dynamically generated page delivered to the browser
- All reference to ‘templates’ removed
